

Data Migration

Dump your legacy platform and accelerate your transition

Time's up; it's time to clean house. Those legacy platforms that sit in the corner quietly burning up your budget and doing nothing much useful have got to go. No one will thank you for this more than the business—they know it's time to get the new stuff.

What is Platform Modernization?

Everyone has circa 1990s and 2000s technology still laying around, and that is NOT OK anymore (on so many levels!). First and most importantly, security is too critical in today's world of weaponized hacks to allow 20-year-old systems to stay connected to your network (that's a disaster waiting to happen). Replatforming data and apps to modern systems give you more performance for big data, lower cost per transaction, and state-of-the-art security. It's what you've been waiting for.

The Value

- Elimination of obsolescence
- Alignment with industry standards, best practices

The Proof

- In-memory data speeds
- Cloud economies of scale
- Migration success patterns
- Industry adoption trends

The Outcomes

- Easy performance wins
- 30–50 percent operational savings
- Best-in-class security

What our clients say

"The performance gains of our platform modernization were transformational—exceeded every expectation."

— *Blue Cross Blue Shield LA*

The Capax Difference

New low-cost platform foundation for the high-performance, powerful analytics your business needs to stay competitive.

At Capax Global, our team has an unmatched background in commercial application development which makes our modern application development, data platform modernization and advanced analytics practices enterprise class. We will be with you for your entire journey, no matter where you are starting from, using our IDEA-based approach: Innovate, Design, Execute, and Achieve.
